

WHAT IS CLAIMED IS:

1. A communication apparatus including means for connecting to a public communication line, a scanner for reading an image, means for converting the image  
5 read by said scanner to have a predetermined format, and means for executing a sending process to a server connected to the public communication line in a case where it is necessary to send the converted image as an electronic mail to the Internet, said apparatus

10 comprising:

means for registering a facsimile number of a destination to which the image should be sent, for an abbreviation number;

15 means for registering an electronic mail address of said destination for the same abbreviation number; a key corresponding to the abbreviation number, a key representing facsimile sending, and a key representing electronic mail sending;

20 means for executing the facsimile sending of the read image to the registered facsimile number in a case where said key representing the facsimile sending is depressed pursuant to depression of said key corresponding to the abbreviation number; and

25 means for executing the electronic mail sending of the read image to the registered electronic mail address in a case where said key representing the electronic mail sending is depressed pursuant to

depression of said key corresponding to the abbreviation number.

2. An apparatus according to Claim 1, further  
5 comprising means for notifying the destination having the facsimile number registered for the same abbreviation number as that for which the electronic mail address has been registered, of sending of the electronic mail within a predetermined time before and  
10 after the sending of the electronic mail, in case of sending the electronic mail to the electronic mail address.

3. An apparatus according to Claim 1, wherein the  
15 public communication line is a digital communication line capable of simultaneously executing plural communications,

wherein said apparatus executes the facsimile sending of the read image to the registered facsimile  
20 number by using a first communication channel, and executes the electronic mail sending of the read image to the registered electronic mail address by using a second communication channel, in a case where said key representing the facsimile sending and said key  
25 representing the electronic mail sending are depressed pursuant to the depression of said key corresponding to the abbreviation number.

4. An apparatus according to Claim 1, wherein the public communication line is a digital communication line capable of simultaneously executing plural communications, and there is prepared a key  
5 representing simultaneous sending of the facsimile and the electronic mail, said key being depressed pursuant to the depression of the key representing the abbreviation number,

wherein said apparatus executes the facsimile  
10 sending of the read image to the registered facsimile number by using a first communication channel, and executes the electronic mail sending of the read image to the registered electronic mail address by using a second communication channel, in a case where said key  
15 representing the simultaneous sending is depressed.

5. An apparatus according to Claim 1, further comprising:

means for registering, in the registering process  
20 for the abbreviation number, input data as the electronic mail address in a case where said key representing the electronic mail sending is depressed pursuant to input of the electronic mail address; and

means for registering, in the registering process  
25 for the abbreviation number, the input data as the facsimile number in a case where said key representing the facsimile sending is depressed pursuant to input of

the facsimile number.

6. An apparatus according to Claim 1, further comprising means for registering, in the registering  
5 process for the abbreviation number, input data as the electronic mail address in a case where a specific symbol used in the electronic mail address is included in the input data.

10 7. An apparatus according to Claim 1, further comprising:

a first CPU (central processing unit) for detecting that said key representing the electronic mail sending is depressed;

15 means for notifying a second CPU that said first CPU executed the detection;

means for forming electronic mail data when said second CPU receives the notification; and

20 means for executing the data sending process from said second CPU to the public communication line.

8. A communication method in a communication apparatus including means for connecting to a public communication line, a scanner for reading an image, a  
25 means for converting the image read by the scanner to have a predetermined format, and a means for executing a sending process to a server connected to the public

communication line in a case where it is necessary to send the converted image as an electronic mail to the Internet, said method comprising:

5 a step of registering a facsimile number of a destination to which the image should be sent, for an abbreviation number;

a step of registering an electronic mail address of the destination for the same abbreviation number;

10 a step of executing facsimile sending of the read image to the registered facsimile number in a case where a key representing the facsimile sending is depressed pursuant to depression of a key corresponding to the abbreviation number; and

15 a step of executing electronic mail sending of the read image to the registered electronic mail address in a case where a key representing the electronic mail sending is depressed pursuant to depression of the key corresponding to the abbreviation number.

20 9. A method according to Claim 8, further comprising a step of notifying the destination having the facsimile number registered for the same abbreviation number as that for which the electronic mail address has been registered, of sending of the  
25 electronic mail within a predetermined time before and after the sending of the electronic mail, in case of sending the electronic mail to the electronic mail

address.

10. A method according to Claim 8, wherein the  
public communication line is a digital communication  
5 line capable of simultaneously executing plural  
communications,

wherein said method executes the facsimile sending  
of the read image to the registered facsimile number by  
using a first communication channel, and executes the  
10 electronic mail sending of the read image to the  
registered electronic mail address by using a second  
communication channel, in a case where the key  
representing the facsimile sending and the key  
representing the electronic mail sending are depressed  
15 pursuant to the depression of the key corresponding to  
the abbreviation number.

11. A method according to Claim 8,  
wherein the public communication line is a digital  
20 communication line capable of simultaneously executing  
plural communications,

wherein said method executes the facsimile sending  
of the read image to the registered facsimile number by  
using a first communication channel, and executes the  
25 electronic mail sending of the read image to the  
registered electronic mail address by using a second  
communication channel, in a case where a key

representing simultaneous sending of the facsimile and the electronic mail is depressed pursuant to the depression of the key representing the abbreviation number.

5

12. A method according to Claim 8, further comprising:

10 a step of registering, in the registering process for the abbreviation number, input data as the electronic mail address in a case where the key representing the electronic mail sending is depressed pursuant to input of the electronic mail address; and

15 a step of registering, in the registering process for the abbreviation number, the input data as the facsimile number in a case where the key representing the facsimile sending is depressed pursuant to input of the facsimile number.

20 13. A method according to Claim 8, further comprising a step of registering, in the registering process for the abbreviation number, input data as the electronic mail address in a case where a specific symbol used in the electronic mail address is included in the input data.

25

14. A method according to Claim 8, further comprising:

a step of notifying a second CPU that a first CPU detected the depression of the key representing the electronic mail sending;

a step of forming electronic mail data when the  
5 second CPU receives the notification; and

a step of executing the data sending process from the second CPU to the public communication line.

15. A storage medium to store a computer program  
10 for the implementation of a communication method comprising the following steps:

a step of registering a facsimile number of a sending destination for an abbreviation number;

a step of registering an electronic mail address  
15 of the sending destination for the same abbreviation number;

a step of executing facsimile sending of a read image to the registered facsimile number in a case where a key representing the facsimile sending is  
20 depressed pursuant to depression of a key corresponding to the abbreviation number; and

a step of executing electronic mail sending of the read image to the registered electronic mail address in a case where a key representing the electronic mail  
25 sending is depressed pursuant to depression of the key corresponding to the abbreviation number.

16. A storage medium according to Claim 15 to store a computer program for the implementation of the communication method further comprising a step of notifying the destination having the facsimile number, registered for the same abbreviation number as that for which the electronic mail address has been registered, of sending of the electronic mail within a predetermined time before and after the sending of the electronic mail, in case of sending the electronic mail to the electronic mail address.

17. A storage medium according to Claim 15 to store a computer program for the implementation of the communication method wherein a used public communication line is a digital communication line capable of simultaneously executing plural communications,

wherein said method executes the facsimile sending of the read image to the registered facsimile number by using a first communication channel, and executes the electronic mail sending of the read image to the registered electronic mail address by using a second communication channel, in a case where the key representing the facsimile sending and the key representing the electronic mail sending are depressed pursuant to the depression of the key corresponding to the abbreviation number.

18. A storage medium according to Claim 15 to store a computer program for the implementation of the communication method wherein a used public communication line is a digital communication line  
5 capable of simultaneously executing plural communications,

wherein said method executes the facsimile sending of the read image to the registered facsimile number by using a first communication channel, and executes the  
10 electronic mail sending of the read image to the registered electronic mail address by using a second communication channel, in a case where a key representing simultaneous sending of the facsimile and the electronic mail is depressed pursuant to the  
15 depression of the key representing the abbreviation number.

19. A storage medium according to Claim 15 to store a computer program for the implementation of the communication method further comprising:

a step of registering, in the registering process for the abbreviation number, input data as the electronic mail address in a case where the key representing the electronic mail sending is depressed  
25 pursuant to input of the electronic mail address; and

a step of registering, in the registering process for the abbreviation number, the input data as the

facsimile number in a case where the key representing the facsimile sending is depressed pursuant to input of the facsimile number.

5           20. A storage medium according to Claim 15 to store a computer program for the implementation of the communication method further comprising a step of registering, in the registering process for the abbreviation number, input data as the electronic mail  
10 address in a case where a specific symbol used in the electronic mail address is included in the input data.

          21. A storage medium according to Claim 15 to store a computer program for the implementation of the  
15 communication method further comprising:

          a step of notifying a second CPU that a first CPU detected the depression of the key representing the electronic mail sending;

          a step of forming electronic mail data when the  
20 second CPU receives the notification; and

          a step of executing the data sending process from the second CPU to the public communication line.
